Globalization and City Ports

The response of city ports in the Southern Hemisphere
Contents

1. Introduction
   Marisa Carmona 1

2. Keynotes: Restructuring of Central Areas in Port Cities
   Hans Harms 9

3. Durban Port: Adapting to Changing Times
   Marinda Schoonraad 15

4. Transformations in Port-Cities in Times of Globalisation:
   The Case of the Rio de la Plata Estuary
   Maria J. Bazan-Lopez 29

5. The Split between the City and the Port: The Case of Valparaiso
   Marisa Carmona 41

   Pedro Jorgensen and Nina Rabha 59

7. Cities and Ports: The Port of Montevideo
   Gerardo García, Elbia Palomeque, Cristina Castro,
   Matilde de los Santos, Pablo Sierra, Héctor Zinola 71

8. Urban Development in the Port Cities of the Rio de la Plata Basin
   Olga Ravella 83
9. Rosario
The Significance of the River Shore in the Development of the City

Roberto Monteverde and Oscar Bragos

10. Changes in the Panama Canal
and the Transformation in Panama City

Alvaro Uribe and Marisa Carmona

11. Urban Project Atelier Valparaiso

Eliana Muga
Globalisation policies have been advocated by governments and by international development agencies as the most promising way out from underdevelopment. They argue that these policies would enhance the trading opportunities of the less developed regions in a world-wide market and would promote their internal modernisation by transferring advanced management and technology from global firms. Structural adjustments city marketing and infrastructure modernisation appear simultaneously as a requirement and as an outcome of the new age of globalisation.

The Research Atelier Alfa takes globalisation as an important component of current thinking about city, yet sees the city not as a purely macroeconomic imperative but as a social process of building and negotiations, in which different actors state their interest, propose solutions and generate decisions. The IBIS network has started a three number series about Globalisation and City Ports. As globalisation intensifies greater transformations on the position of regions and cities in the global system as well as on trade and transport system have taken place. This series will identify the effects of globalisation in city ports in three regions: in the Northern Hemisphere (Alfa-Ibis Book 9) - where the main port hubs are located and the main shipping lines circulate; in the Southern Hemisphere (Alfa-Ibis Book 10) - where the main transhipping system take place and a forthcoming publication over the Asian Pacific Rim (Alfa-Ibis Book 11) which is the the most dynamic region in maritime transformation (2004).

Dr. Marisa Carmona  Associated Professor at the Delft University of Technology and has developed experience in urban planning and urban management in Africa and Latin America. Is the coordinator of IBIS Network
